PROFESSIONAL SUMMARY

Aspiring software engineer with a solid foundation in Python, SQL, and data tools including BI. Delivered projects in IoT systems, database-driven analytics, and ETL pipeline development. Actively exploring AI tools to build intelligent automation workflows. Strong problem-solver with a detail-oriented approach, seeking to apply technical skills in a software engineering or data-focused role.

TECHNICAL SKILLS

- Python, SQL, Pandas, NumPy, Matplotlib
 - Power BI, Excel, Power Query, DAX
 - PostgreSQL, MySQL
 - ETL Pipelines, Dashboard Development, KPI Tracking
 - AWS, Azure, GCP (Basics)
 - AI Enthusiast & Tools Explorer
 - Prompt Engineering
-

EDUCATION

(Nov-2022 | May-2026)

Bachelor of Engineering (B.E.) – Electronics & Communication Engineering
PES Institute of Technology, Shivamogga, Karnataka
VTU | CGPA: 8.0

INTERNSHIP EXPERIENCE

(Feb 2026 – May 2026)

Data Analytics Intern | Nexus Core Innovation

- Worked on end-to-end **data pipeline** — data extraction, cleaning, analysis, and visualization.
 - Used **Python** (Pandas, NumPy, Matplotlib), **SQL**, **PostgreSQL**, and **Power BI** for real-world business datasets.
 - Built interactive **Power BI** dashboards and optimized SQL queries using indexing techniques.
-

PROJECTS

IoT Health Monitoring System

- Developed a real-time IoT health monitoring system using ESP32 and biomedical sensors.
- Integrated Firebase cloud monitoring with intelligent health alert features.

Binance Futures Trading Bot | Python, python-binance, Click, REST API

- Built a modular **Python** CLI to place MARKET and LIMIT orders on Binance Futures Testnet, with layered input validation, custom exception handling, and a timestamp-drift auto-sync mechanism for reliable signed **API** requests.
- Designed clean 4-module architecture (**client**, **orders**, **validators**, **logging**) with dual-sink structured logging capturing full request/response payloads; verified live execution with real testnet Order IDs.

Health Analyzer Dashboard | Python • SQL • PostgreSQL • Power BI

- Engineered a healthcare analytics platform analyzing **2.46M+ records** across **28+** medical specialties.
- Designed executive dashboards that visualized patient wait-list trends, specialty demand, and operational KPIs.
- Automated data cleaning, **ETL** workflows, and database integration for reliable reporting.
- Leveraged data analytics to support evidence-based healthcare decision-making.

TechHaven Customer Support Chatbot — n8n, Pinecone, Google Gemini, OpenRouter

- Built a RAG-based AI chatbot using n8n with a Webhook trigger, AI Agent, and Pinecone vector store enabling context-aware responses from policy documents
 - Implemented Google Gemini embeddings for document vectorization and Cohere reranker to improve retrieval accuracy from the knowledge base.
 - Integrated an LLM classifier to route user queries by policy type (shipping, returns, warranty, etc.) with a Structured Output Parser for reliable response formatting.
-

CERTIFICATIONS

- Microsoft Power BI – Udemy
 - SQL and PostgreSQL for Beginners – Udemy
 - Python for Data Analytics – VTU Academy
 - Data Analytics Intern – Nexus Core Innovation
 - RPA Skill Development – UiPath ICT Academy
-

Hobbies & Interests

- Exploring **AI/automation tools**, building personal projects, reading about startups and entrepreneurship, agriculture and rural innovation.
